

Solution:

Cash earned directly from customers = $0.2 \times \$900,000 = \$180,000$.

Others are earned from receivables. Out of \$720,000 that is sold on credit, only \$30,000 has increased, meaning that \$690,000 has been paid to the company.

Thus, the total cash received from customers was \$870,000.
